Automotive

CEM Jewel is a perfect blend of software excellence and jewelery domain knowledge. CEM Jewel uses state of the art technology and integrates Finance, Sales, Inventory, Purchase, Manufacturing, Sub-contracting, Point of Sale, RF-ID and Bar code. The product / item image visibility is provided across the software. CEM Jewel reports give the right information at the right time.

CEM Project Pro Caters analysis for both top management as well as planners. Upon collecting progress figures, entire report and multitude of analysis reports can be prepared within half-an-hour, whereas it requires few days in Primavera for large projects. Progress reports can be prepared by secretary itself. Number planners required for the company can be drastically reduced .

CEM Staffing Service is to provide World Class Talent “Acquisition & Retention” solutions to leading clients across the globe. Our Vision is to provide quality HR Service to meet our client’s need on just in time (JIT) manner. CEM is the place where we conduct “JOB Satisfaction Survey” to analysis the Individuals opinion periodically. We provide one-shop solution for our clients to manage their all HR related activities

RFID

The prime purpose of the stock verification and adjustment using barcode /RFID is to ensure that inputs and output of the stock has been accounted accurately. Taking count of stock verification manually is very time consuming. But when the same thing is been done using RFID or a Barcode ,it eases the physical stock taking and also save time to a considerable extend.

Weigh Bridge

*To avoid manual intervention and to keep track of each truck load in the system, this solution provides integration directly to the weighbridge to fetch in the truck details and both gross weight ,tare weight, based on which the net weight is arrived by the system. On completion, the relevant truck details must be selected and on click of the '**Generate Packing slip**', system will consolidate and generate the pack slip in the base AX screen.*
